One of the major objectives of the ECPGR-funded project “PomeFruit_C&E” [1] is to promote the molecular characterization of European pear collections and proceed to the standardization of the SSR data across collections. Such standardization is required to compare the pear accessions at the European scale and beyond.

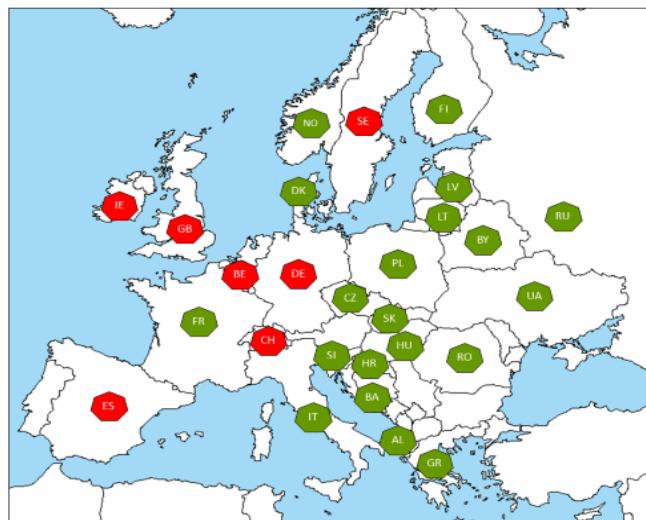

Material & Methods

- 19 SSR (11 SSR of ECPGR set [1] + 8 additional SSR)
- 2,593 accessions originating from 20 European countries newly genotyped (green dot)
- Development of dedicated allelic correspondence tables for 2,374 accessions originating from 7 European countries previously genotyped (red dot) [2] [3] [4] [5] [6]

MultiPlex	Marker	LG	Dye	ECPGR set
GP_MP01	EMPc11	11	FAM	x
	CH01f07a	10	NED	x
	CH02b10	2	VIC	x
	CH01h01	17	NED	
	CH05f06	5	PET

Results & Discussion

- 4,912 accessions with at least 9 standardized SSR
- 2,206 unique genotypes (i.e., distinct SSR profiles)
- PUNQ code (*Pyrus UNiQue genotype code*) assigned for each genotype in order to better characterize any new accession according to this standardized dataset.

Next step

- Analysis of genetic structure
- Analysis of relationship inferences
