

*Grapevine genetic
resources: evaluation and
pre-breeding at the
European level
rapevine Breeding*

Reinhard Töpfer and Erika Maul

Grapevine Databases at JKI

- the only literature DB for viticulture and oenology
- currently 74.000 documents (since 1969)
- bibliographical information, abstracts, DOI, full text
- since 1994 technical journals in German
- ~ 2.500 visitors/month with 30.000 accesses
- co-funding with Rheinland-Pfalz
- Editor of VITIS (since 1957)
- www.vitis-vea.de

- begin 1983 – since 1996 on internet
- **cultivar-related**
- > 20.000 cultivars, breeding strains and wild species
- passport-, resistance- and marker data
- ca. 7.000 accesses/month
- www.vivc.de

- since 1997 on internet
- **accession-related**
- maintained by curators of European repositories online
- ~ 40.000 accessions
- characterisation-, evaluation-, marker data, photos
- ca. 1.300 accesses/month
- www.eu-vitis.de

- since 2010 on internet
- **accession-related**
- 4224 accessions from 7 collections in Germany*)
- www.deutsche-genbank-reben.de

*) ~ 3800 accessions at JKI

Start of grapevine maintenance activities in Europe

1982: First official agreements on important measures

- IBPGR-working group „*Vitis* Genetic Resources“
Thessaloniki, Greece, 29 April – 1 May, 1982
Chair: Prof. G. Alleweldt
 - Inventory of maintenance activities in Europe
 - Collection of old neglected cultivars
 - Description of cultivars for identification of synonymy through
 - Utilization of morphological descriptors (21 characteristics)
- OIV-expert group „Vine selection“
Adoption of resolution N° 2/82 recommending
 - Collection in centers of high genetic diversity
 - Maintenance of *Vitis*-species, cultivars and clones in repositories
 - Development of international collaboration between repositories
 - Free exchange of grape material

Start of grapevine maintenance activities in Europe

One of the first steps:

→ implementation of a worldwide inventory of germplasm

Objectives:

- Documentation of worldwide existing collections
- Documentation of the therein maintained accessions

Results:

- Répertoire mondial des collections de *Vitis* (OIV 1987)
- Establishment of the *Vitis* International Variety Catalogue (IVC, since 1984)

History of the database

In 1984 the establishment of the *Vitis* International Variety Catalogue (VIVC) took place at the Institute for Grapevine Breeding Geilweilerhof. The concept of a database on grapevine genetic resources was supported by IBPGR (today called Bioversity) and the International Organisation of Vine and Wine (OIV). Today VIVC is an encyclopedic database with around 23000 cultivars, breeding lines and *Vitis* species, existing in grapevine repositories and/or described in bibliography. It is an information source for breeders, researchers, curators of germplasm repositories and interested wine enthusiasts. Besides cultivar specific passport data, SSR-marker data, comprehensive bibliography and photos are to be found.

[History »](#)

Since 1996: Web presence of VVC

Vitis International Variety Catalogue (VVC)

Main objectives

- Registration of the worldwide existing and/or documented grape germplasm
- Comprehensive description of grape germplasm
- Solution of synonymy, homonymy and misnaming
- Contribution in monitoring endangered germplasm preservation
- Recording of cultivar describing bibliography

Relationships based on nine microsatellites

Potential uses: although nine markers are not enough to ascertain a putative kin relationship, this tool helps to find first-degree relationships, to check the reliability of the pedigree given by breeders and to explore genetic and geographic background of a variety.

Note

Paste your profile according to the given example. Replace missing data with md.

Example:

Insert your profile: 135 145 228 242 239 247 241 255 180 195 248 248 md md 196 204 237 249

Genetic profiles of 3457 cultivars are available.

The European Vitis Database is being maintained since 2007 by the
©Julius Kühn-Institut - Federal Research Centre for Cultivated Plants (JKI), Institute for Grapevine Breeding Geilweilerhof, Siebeldingen, Germany.
The establishment of the European Vitis Database with free access via Internet has been carried out in the scope of the European Project Genres081. The follow up and enlargement will be accomplished within GrapeGen06 and by the European Cooperative Programme for Plant Genetic Resources (ECPGR).

Data import and
management by curators of
repositories.

Data check during data import

To modify your MCPD data please see the three options below:

- Adjustment:** Click on the "error" message (e.g. BERRY_COLOR) to adjust and to save your data. Your data set will be checked again.
- Deletion of an accession:** Click on the icon in front of the row to delete the complete accession. **Attention:** Any record (data, photos) linked to the accession will be deleted as well.
- Abort of import:** If too many data sets have to be adjusted you may want to stop the import and revise the MCPD data in your excel file. Click on the button 'cancel import' below.

cancel import

All "errors" need to be adjusted to pass to the next step.

Modern Grapevine Breeding needs to

- share work to save time → evaluation of genetic resources
- develop complementary pre-breeding programs → develop introgression lines
- exchange of grapevine genetic resources and breeding material

→ No single grapevine breeding program is faster than the evolution of the pathogen

Thank you for your
attention
