

Plant genetic resources conservation in Europe: the AEGIS Experience

Lorenzo Maggioni, Jan Engels, Elinor Lipman ECPGR Secretariat

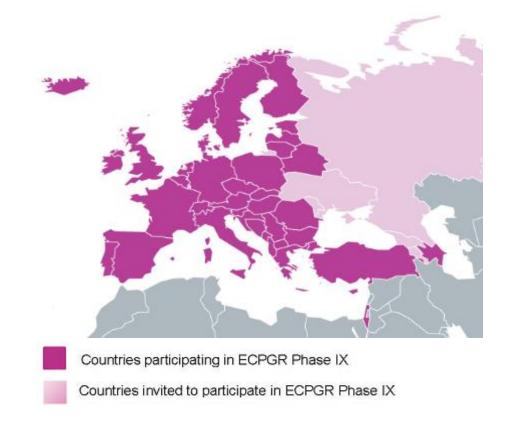

ECPGR - www.ecpgr.cgiar.org

ECPGR aims at conserving and facilitating the use of plant genetic diversity in Europe as a cooperative effort

- Countries
 - own the programme
 - contribute funds and implement activities
- Secretariat ensures coordination

ECPGR Long-term Goal

National, Sub-regional and Regional Programmes in Europe collaboratively, rationally and effectively conserve *ex situ* and *in situ* PGRFA, provide access and increase their utilization

ECPGR – achievements (1980 – 2013)

- Working Group activities
- Collaborative projects
- EURISCO (European *ex situ* Internet catalogue)

Report of a Working Group on Grain Legumes

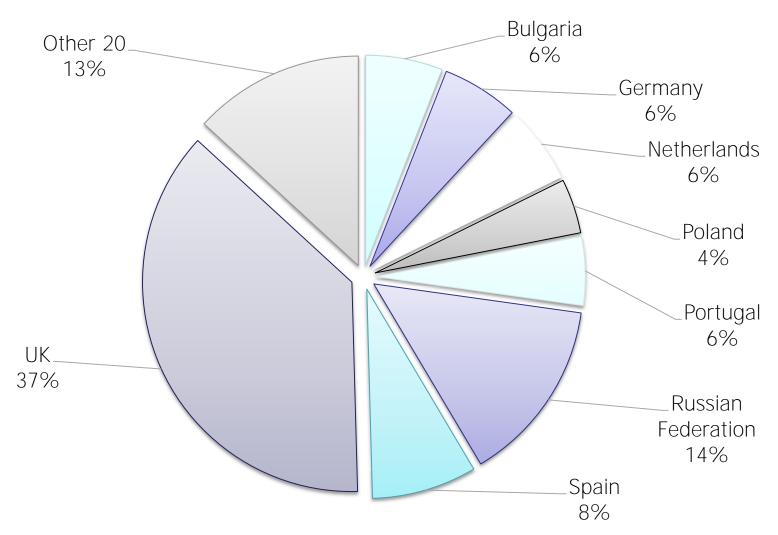

Background – Ex situ conservation in Europe

- 600 germplasm collections/genebanks in Europe (WIEWS)
- > 1.7 million accessions (SOW II, 2010)
- 35-50% unique accessions
- Significant differences in quality of conservation
- Accessions for a given crop are distributed across several countries

Decentralized collections

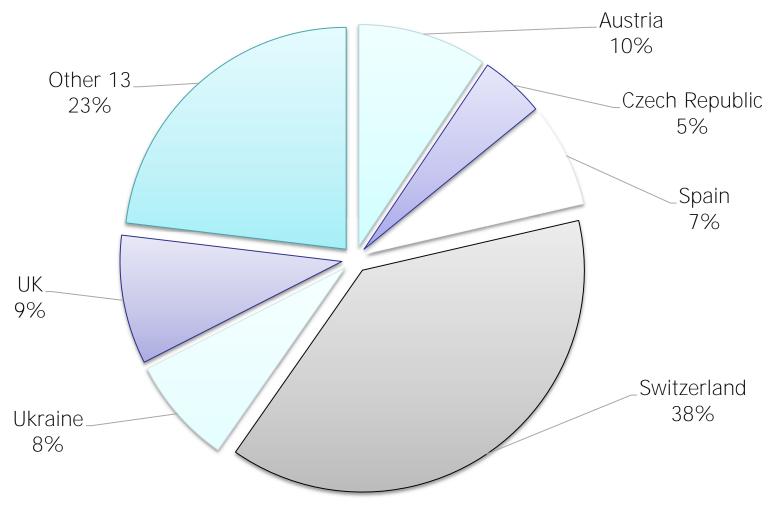

12 000 *Brassica oleracea* accessions in Europe (source: EURISCO)

Decentralized collections

23 000 *Malus domestica* accessions in Europe (source: EURISCO)

Terms of access to germplasm

Annex I crops (35 food crops, incl. Wheat, Beans, Apple): Standard Material Transfer Agreement of the International Treaty on PGRFA (Multilateral System)

Non-Annex I crops (e.g. Soybean, Tomato, Pear):
Bilateral arrangements as per Convention on Biodiversity

Wild brassicas as sources of agronomic traits

	Trait	Number of accessions	Available through SMTA	%
B. hilarionis	Resistance to pod shattering	7	2	28 %
B. incana	Resistance to Verticillium wilt and white fly	373	7	2 %
B. macrocarpa	Resistance to pod shattering	70	12	17 %
B. montana	Resistance to white fly	118	14	12 %
B. villosa	Anti-oxidant glucosinolates, resistance to flea beetles and white fly	85	9	10 %

Importance of taxonomic identification

Genus Patellifolia

- Source of resistance genes (beet cyst nematode) for sugar beet
- Ca. 60 accessions in European genebanks
- Taxonomy is still confused
- Need for reference material and certain identification to evaluate the distribution of genetic diversity

Patellifolia procumbens © Lothar Frese

Regeneration

Variability of climatic conditions in Europe:

ideal to share tasks

Brassica oleracea subsp. capitatoides © L. Maggioni

Quality standards: variability and cross-checking

Seed regeneration

- Vector used for insect-pollinated, wild species
- FAO: no standard

Institute	Lettuce	Spinach
BGR-IPGR	not specified	
CZE-CRI	bees	
DEU-IPK	solitary bees, wild insects	
GBR-WGRU	no vector	
HUN-RCAT	no vector	
ISR-IGB	bees	
ISR-IOE		
NLD-CGN	flies	
SVN-KIS		

AEGIS objective:

Conserving in a collaborative way and at agreed quality standards, the genetically unique and important accessions for Europe of all crops and making them available for breeding and research through SMTAs

Key components of AEGIS

- MoU (Memorandum of Understanding)
- European Collection
- AQUAS (AEGIS Quality System)

Network of services

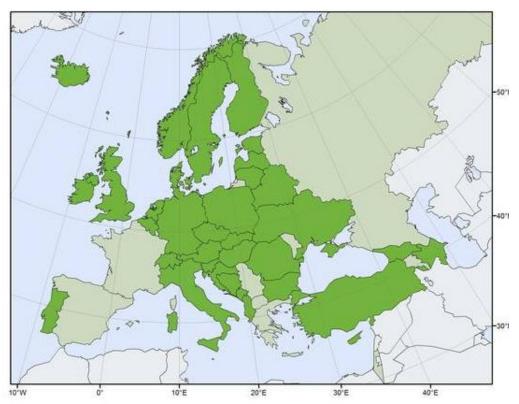

Identify expertise across Europe and provision of services, such as:

- Cryopreservation units
- Safety-duplication sites (e.g. national genebanks; Svalbard)
- Multiplication fields at different locations (environment!)
- Taxonomy expertise
- Sequencing facilities and bioinformatics
- Genotyping / Phenotyping facilities
- Documentation (i.e. EURISCO; Crop Portals)
- Capacity building

AEGIS membership status

http://aegis.cgiar.org/

AEGIS Member Countries (April 2014)

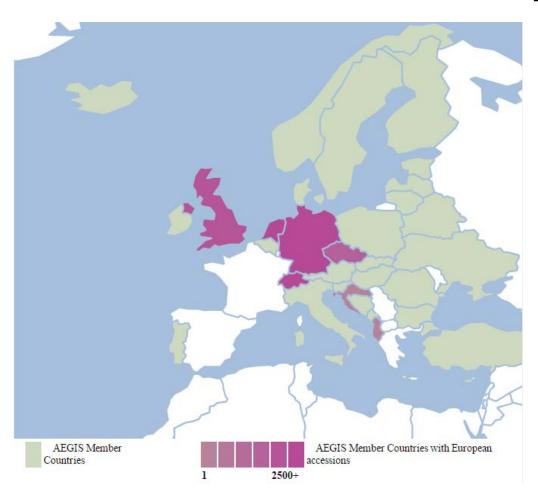

34 Members58 Associate Members' Agreements

- 1. Albania (06 May 2009) Associate Members
- 2. Austria (05 December 2012) Associate Members
- 3. Azerbaijan (16 July 2009) Associate Members
- 4. Belarus (02 November 2011) Associate Members
- 5. Belgium (01 June 2012) Associate Members
- 6. Bosnia and Herzegovina (19 May 2010)
- 7. Bulgaria (02 December 2009) Associate Members
- 8. Croatia (02 December 2009) Associate Members
- 9. Cyprus (15 September 2012) Associate Members
- 10. Czech Republic (23 July 2009) Associate Members
- 11. Denmark (22 February 2010) Associate Members
- 12. Estonia (22 May 2009) Associate Members
- 13. Finland (02 December 2009) Associate Members
- 14. Georgia (18 May 2009) Associate Members
- 15. Germany (05 November 2009) Associate Members
- 16. Hungary (22 November 2011) Associate Members
- 17. Iceland (22 October 2010) Associate Members
- 18. Ireland (22 July 2009)
- 19. Italy (03 March 2014)
- 20. Latvia (01 June 2012)
- 21. Lithuania (12 October 2010)
- 22. Montenegro (16 December 2010)
- 23. Netherlands (28 May 2009) Associate Members
- 24. Norway (17 August 2009) Associate Members
- 25. Poland (17 May 2010) Associate Members
- 26. Portugal (20 November 2009)
- 27. Romania (14 April 2010) Associate Members
- 28. Slovakia (17 June 2009) Associate Members
- 29. Slovenia (21 September 2009) Associate Members
- 30. Sweden (31 May 2011) Associate Members
- 31. Switzerland (27 July 2009) Associate Members
- 32. Turkey (14 November 2011) Associate Members
- 33. Ukraine (30 April 2009)
- 34. United Kingdom (18 June 2010) Associate Members

The European Collection today

25 291 accessions

Germany: 7904

The Netherlands: 5862

Switzerland: 4838

UK: 1659

Czech Republic: 1222

Croatia: 90

Albania: 8

Concluding remarks -1

- The AEGIS principles have been unanimously endorsed by the technical representatives (National Coordinators)
- Users (e.g. breeders) easily see the benefits and recommend implementation of the system
- At the Ministerial level, sometimes there is fear of increasing costs and long-term commitment
- Genebanks do not always perceive a benefit (increasing efficiency of the system requires local adjustments and investments)
- Progress is dependent on good coordination at national level of all the stakeholders

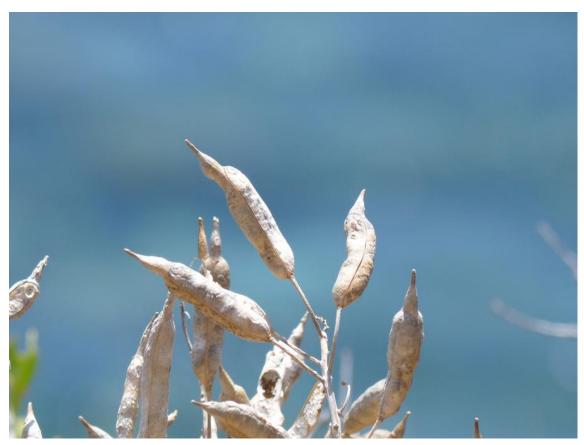

Concluding remarks -2

Too early to say if AEGIS will be successful

- Hopefully progress will lead to:
 - → Better conservation (coverage, efficiency, quality, safety)
 - → Better knowledge of the material (documentation system, characterization)
 - → Better availability (policy, speed, quality)
- = Better collaboration and sharing of responsibilities

Thank you for your attention!

Brassica macrocarpa © L. Maggioni
